Version controls: Git, GitHub, Bit-bucket (running)
Databases: SQLite, PostgreSQL (running)
Operating Systems: Linux, Windows
Interpersonal Skills: Teamwork, Leadership, Communications, Marketing
Other Skills: UI/UX basic concept, SAD basic concept, Research

----

PROJECTS
----

1. **Shanirvor (স্বনির্ভর)**: We have developed a web-based software powered by Django using agile methodology which will launch soon. The official name of this project will be 'SHANIRVOR (স্বনির্ভর)'. It's a local freelancing platform application in the testing stage now.
*(source codes have moved for privacy issue)
*(this is a unique project by Khidmah IT Python team)

2. **ShohozTech (সহজটেক)**: I am working on a project that is very important for my learning and software skills. My friend has developed the front-end while I have prepared the back-end using Python on Django. However, the project isn't ready for hosting as the name is not final and there are more functionalities that must be added like the 'Comments section', 'API', 'Email subscription', etc. On top of this I need to clean the codes and add my portfolio so the final project will be a web-based blog and video publications application along with my portfolio after testing.

*(this project includes UI/UX & SAD analysis)
*(github.com/siyam04/ShohozTech)

3. **Other Projects & Contributions**: I know how to use C and python as I have solved some online/offline problems using them. On top of this, I built a converter application based on Java GUI during my 2nd year of university. I also contributed to some other projects that my colleagues and friends have made. I want to increase my knowledge by learning API, Web-scraping, Version controlling, Front-end, Database, JavaScript, etc. so I can develop better projects in the future.
